

Dear Hr Manager,

hope you're doing well! My name is Rishi Jain, and I'm excited to apply for the Software Engineering Internship at Bolt. As a third-year Computer Science student with a passion for building meaningful tech, I'm drawn to the kind of innovative, large-scale problems your team is tackling — from real-time pricing and fraud detection to demand prediction and distributed systems.

What stands out most to me about Bolt is your culture. I really admire how you value engineers who are curious, flexible across languages, and focused on solving problems — not just sticking to one stack. That mindset really aligns with how I approach learning and development.

Over the past year, I've worked on a few full-stack projects that I'm proud of:

Shop Local – a React Native app that connects nearby customers with local shopkeepers.

BookHub – a MERN-based platform for book sharing, smart requests, and library management.

Expense Manager – a personal finance tracker with clean UI and visual expense breakdowns.

Through these, I've gotten hands-on with tools like React, Node.js, and MongoDB. More than just learning frameworks, these projects taught me how to approach real-world problems, collaborate in teams, and build intuitive, scalable solutions. I also have a solid foundation in data structures, algorithms, and object-oriented programming, and I'm always eager to dive into new tools — whether it's TypeScript, Python, or working with distributed systems.

I'm not just looking for an internship to tick a box. I'm looking for a place where I can learn, grow, and contribute — and Bolt feels like that place. I'd love the opportunity to work with and learn from experienced engineers while contributing ideas and energy to your team.

Thank you so much for considering my application. I've attached my resume, and I'd be happy to chat more if you think I might be a good fit.

Warm regards,

Rishi Jain
